Kinetic's Cloud Computing Services

The Cloud Has Changed IT

In the old days, all your data was kept on physical servers stored in your office. If all of your data couldn't fit, you might have put it on a floppy disk or CD. The cloud has changed all of that for the better. At Kinetic, we offer cloud computing services that allow you to access your data on the go, on any device that you choose. In addition to improving productivity and workflow, the cloud can also act as your primary space for data backups and allow you to quickly recover your data in the event of a systems crash. The cloud allows you to work smarter, as you can scale your usage up or down based on the amount of storage your business needs at the time, paying only for what you use. The cloud is continually making IT easier to manage and your business easier to run.

Use Cloud Computing Solutions to Improve Your Workflow

The cloud can be used to improve your company's workflow. The cloud makes this possible by allowing you to work from anywhere—whether you're on your desktop in the office, checking your smartphone in your car, on a tablet in a hotel, or on your laptop at home. You can simply get more done with the cloud. By utilizing it, you make your entire business more effective.

Keep Your Data Safe in the Cloud

Our team at Kinetic strives to keep your data safe. We find protecting your data critically important; that's why we want you to know that anything you put in the cloud

will only be seen by you and the employees, clients, and partners that you decide to share it with. We utilize the latest network security protocols along with our cloud computing services to keep your data safe.

Access Your Data from Multiple Devices

Accessing your data from a laptop or desktop computer is nice, but we understand that today's business world means that working on the go is a necessity. You aren't always going to be able to work in the office. Our cloud computing services allow you to access your files from any device with an internet connection. As long as you can connect to the internet, you are securely connected to our cloud and have access to the files that you need to complete your projects.

Scale Up and Down as Your Needs Change

Purchasing physical servers opens the possibility of purchasing too much or too little storage space, creating an inefficiency that ultimately costs you money. One of the advantages of using our cloud computing services is the ability to scale your usage up or down as your needs change. The cloud allows you to purchase the exact amount of space you need for your business, so you don't have to waste a dime.
